Description

GARMIN speed and cadence sensor

Compatibility: (60/70/310/620/910XT/920XT)

Monitor your pedaling cadence and/or speed with these easy-to-install, self-calibrating wireless sensors

Connect the sensors easily and go. With no magnets or other exposed parts for alignment, these sensors are easy to install, store, and move from bike to bike.

The cadence sensor attaches to any size crank arm. Measure your pedaling cadence to get the most out of your training.

The speed sensor connects to both the front and rear hubs of your wheels and automatically calibrates with your compatible Edge® or Forerunner® to give you accurate speed and distance data, even indoors on a turbo trainer.

Combine both and improve your personal best.
