340 gr. M Size (CE EN 1078)
370 gr. L Size (CE EN 1078)

CE EN 1078 - CPSC 1203 - AS/NZS 2063

3D dry three-dimensional padding based on the open cell multi-layer construction methodology: high technology for maximum comfort and excellent performance.

Extremely aerodynamic and high-performance shell tested in the wind tunnel, capable of offering a very advantageous air penetration coefficient and ensuring air flow that is always in line with the helmet, whatever position the head assumes.

Helmet bag.

Internal padding in Coolmax® fabric composed of two layers and an open cell filter, removable and washable.

The chin strap is in hypoallergenic and washable eco-leather. Soft to the touch, it avoids skin irritation and, adjustable in length, improves the comfort of the fit.

The "in-moulding" technology, by joining the internal polystyrene shell to the external polycarbonate shell, guarantees greater shock absorption capacity.

Among the KASK patented technologies, the innovative magnetic visor stands out. The total adherence of the visor to the helmet thanks to the presence of five magnets allows continuous air flow and high aerodynamics.
